

UNIVERSAL STANDING SEAM

VERSATILE AND DURABLE

With a 12" or 16" wide panel, Universal Standing Seam is suited for residential and light commercial applications. It offers a modern take on vertical seamed roofing systems, with the protection and worry-free longevity of today's quality metal roofs.

Sold as a complete system, Universal Standing Seam boasts a hidden fastener design, with trims and accessories made in a quality-controlled environment, ensuring that your roof is protected by a tried-and-true roofing system. Don't leave your roof to chance, enjoy the beauty and quality of Universal Standing Seam for years to come.

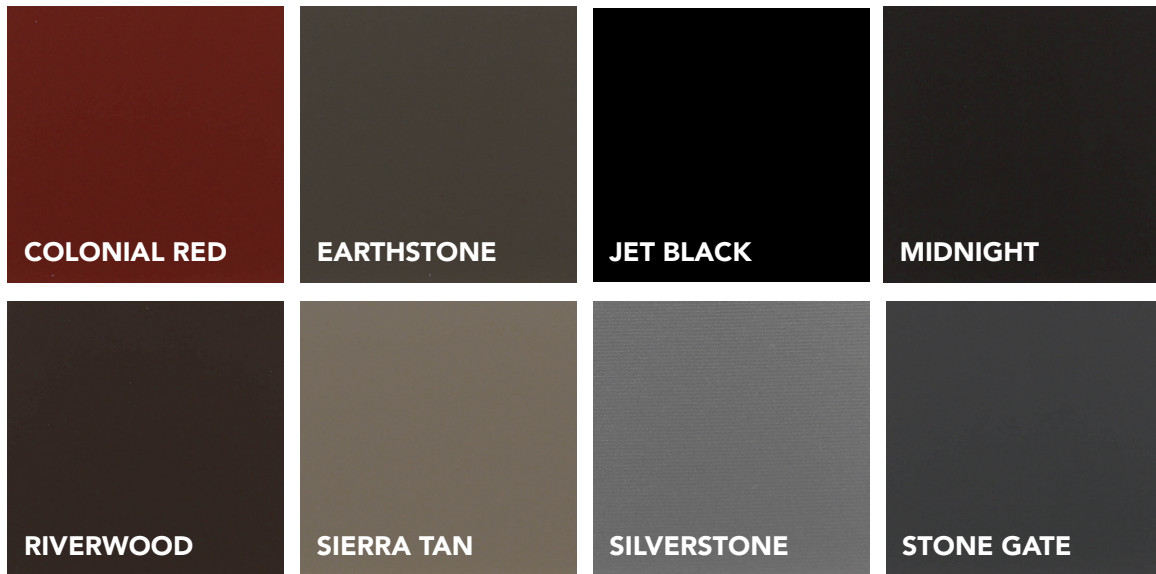

Proudly Manufactured in the USA

Kynar 500® is a registered trademark of Arkema, Inc.

Hylar 5000® is a registered trademark of Solvay Solexis, Inc.

Universal Standing Seam is simply that, a product with endless application possibilities. Fashioned from heavy-duty, Kynar 500®/Hylar 5000® coated galvanized steel, this system ensures your roof will remain functional and beautiful for decades.

Site-Formed Vs. Factory-Made Standing Seam

Raw Materials- Mobile rollformers find their metal from distributors. It isn't held to the same quality, is often made offshore, and can even be sold after someone else has rejected it for poor quality.

Quality- Contractors aren't rollforming experts, and a rollformer on a trailer doesn't compare to one in a quality-controlled environment with a dedicated maintenance team. Rollformers need to be properly serviced and aligned to ensure that panels are flat and straight.

Warranty- Warranties on site-formed panels are limited, and the responsible party can be difficult to track down. There are no guarantees of wind and hail resistance or panel performance. If something goes wrong, homeowners are on their own.

USS is made in our Piqua, OH factory and protected by a Lifetime Limited Warranty.
